Getting Started – Add code support for uCProbe [3/3]

Folder: uCProbe
File name: ucProbe.c

3. Add uCProbe scheduler in motor state machine

```
77  #if ((MOTOR0_BLDC_SCALAR_CTRL_UCPROBE_ENABLE==1))
78  /*UCproBE scheduler function to handle ucprobe comments from UI */
79  void Motor0_BLDC_SCALAR_uCProbe_Scheduler(void)
80  {
81    switch(Motor0_BLDC_SCALAR_ucprobe.control_word)
82    {
83      case 1:  /* Start the motor */
84        Motor0_BLDC_SCALAR_ucprobe.control_word=0;
85        Motor0_BLDC_SCALAR_MotorStart();
86        break;
87
88      case 2: /*Stop the motor*/
89        Motor0_BLDC_SCALAR_ucprobe.control_word=0;
90        Motor0_BLDC_SCALAR_MotorStop();
91        break;

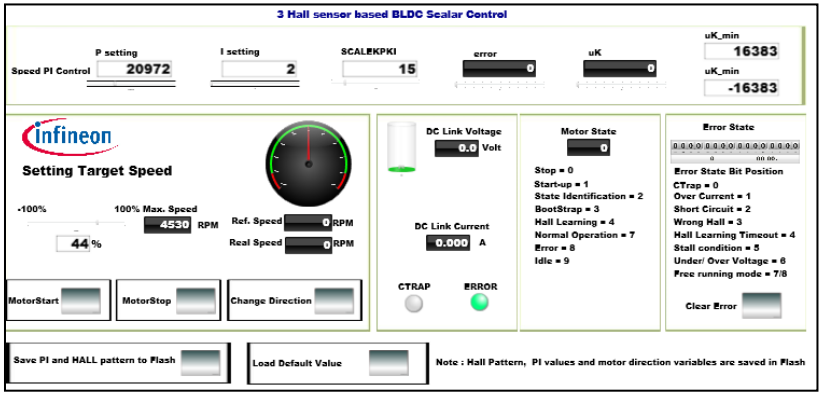
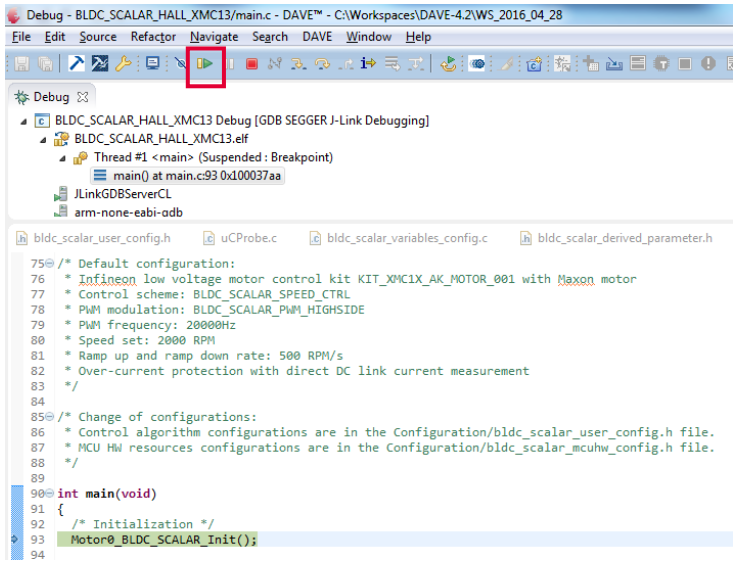
› uCProbe scheduler routine support control code to control the motor



Getting Started – Compile and Verify the project

1. Click “Build Active Project”
2. Click “Debug Configuration” to download the code
3. Click “Resume” to start the application



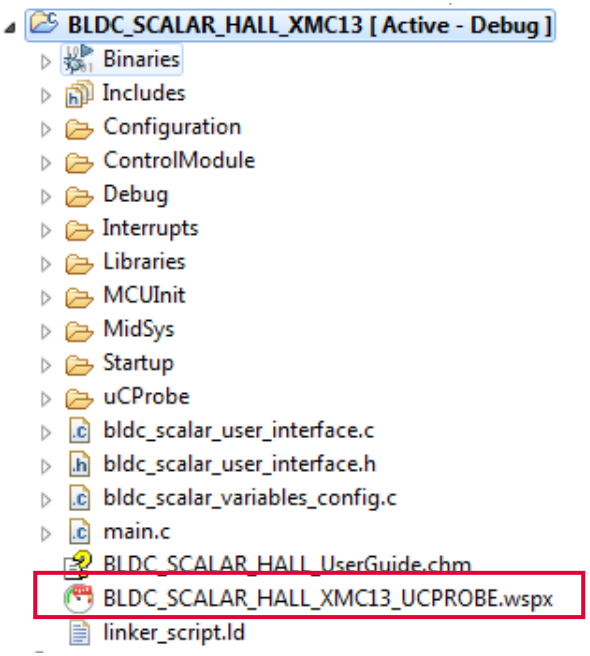
Observation:

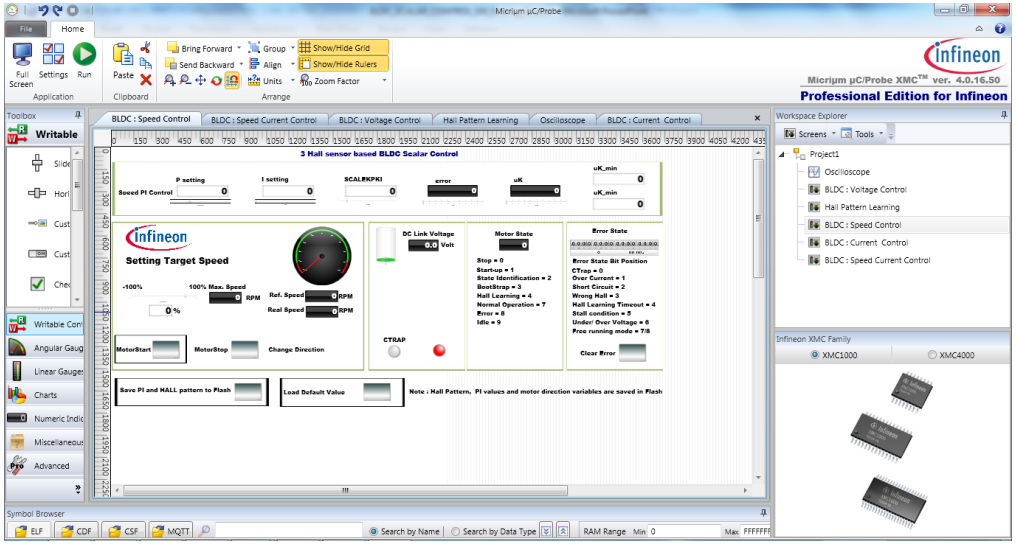
› Motor should ramp to 2000RPM with ramp rate of 500RPM/s.

Getting Started – Interface with µC/Probe [1/6]

› Update of the motor and monitoring motor parameters can be executed using µC/Probe™ XMC™

1. In "BLDC_SCALAR_HALL_XMC13" example project , open µC/Probe™ XMC™ project file.





Note: As the BMI mode is set to SPD0 mode, the program needs to be started in Debug mode before connecting to the uCProbe project.
